

CONMICO

High Pressure Systems Technology

INNOVATIVE TECHNOLOGY

ConMICO Inc.'s latest development project was a hydro-rock fracturing machine for a high production mining requirement for a block caving pre-conditioning application.

ConMICO Inc. engineers and manufactures high pressure water jet systems up to 50,000 psi and up to 1200 H.P. for jet boring, underground hydraulic power units, coating removal, de-scaling and cutting.

ConMICO also specializes in custom-made durable, lightweight grouting and cement injection plants for use in soil consolidation, jet-grouting to 10,000 psi, pile formation, tunnel forming and repairs, forming water curtains, back filling and grouting of cracks in tunnels and mine shafts.

For the grouting systems, ConMICO Inc. manufactures high speed colloidal mixers, double drum mixers, agitators, as well as accessories including packers, valves and high pressure fittings.

Shotcrete and concrete pumps are also available.
